

Mountain Villa

Square Footage:

Main Level: 1908 square feet

Upper Level: 325 square feet

Total: 2233 square feet

With its ten gables, this house is as beautiful as it is solid. The strength and character of the outside is only matched by the grace and elegance of the inside. The arched log opening (another Caribou specialty) into the circular dining area will make your kitchen the place to hang. The large loft area can be utilized as open space or separated into two more bedrooms. Hunker down around the fireplace and let it snow. Get out and get cold so you can come in and get warm again. The only thing better than hanging out in your Mountain Villa is the fun you and your family will have in the mountain air.

Options:

Add a matching circular room extension off the Master Bedroom and enlarge the deck to accommodate a hot tub.
