

## Timberhawk

Square Footage:

Main Level: 1950 square feet

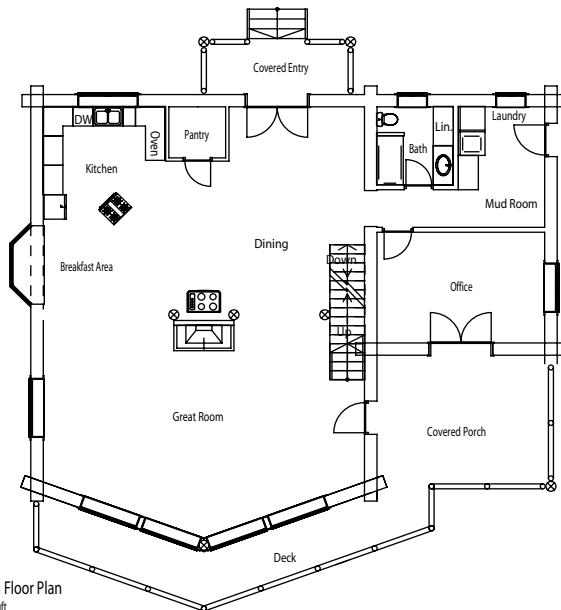

Upper Level: 937 square feet

Total: 2887 square feet

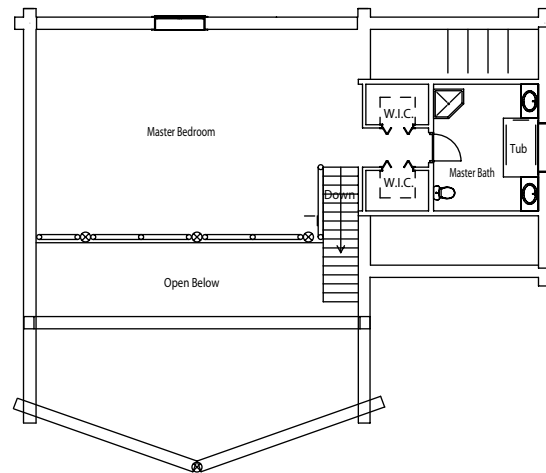

You said you wanted an open floor-plan? You haven't seen anything like this Caribou design. The prow front on makes you feel like you're reaching for the finish-line on a winning run. There's almost 1000 square feet for a private sanctuary. The office can double as a guest room and, of course, if you have a sloping lot such as this, you can finish off with guest bedrooms in the lower level. The "prow" front is the way to go when you have a wonderful view in both directions. The front overhang, with its "flying gable", points you in the direction of the stars. Enjoy.

### Options:

A Caribou log spiral staircase would compliment the fireplace nicely. Go ahead! You can lift the furniture up over the loft railing!
